

# Hose Swivels

Indexators hose swivels are designed for the modern hydraulic systems and are used on, for example, forest machine and truck crane applications. The swivels eliminates wear caused by twisted hoses and also enables safe and simple hose fitting.

An eliminated wear thanks to the swivels unlimited rotation substantially extends the life time of the hose. Twists and turns of only a few degrees can shorten the life time of the hose up to go percent! Another advantage is that the swivel makes it possible to use shorter hoses.

Indexators swivels are of very high quality. They are compact, robust, tight and have got reliable bearings. The swivels rotates under high pressures and are designed for high oil flows. They minimize pressure drop and causes no extra frictional heat.

## Indexator swivels saves money!

- Rotates under high pressures
- Designed for high oil flows
- Causes no extra frictional heat
- Service friendly/able to renovate
